EXPERIENCE

Gen AI Developer
Aug 2026 – Present

Bosch · *Full-time · Braga, Portugal*

- Building a **recruiter agent** for HR and hiring managers that ranks applicants with an LLM tournament of pairwise comparisons, cutting manual screening time by **up to 90%**; currently piloted with recruiters.
- Designed it around **sensitive personal data**: candidate names never reach the model, names are stripped from notes before salary extraction, and all data stays on the recruiter's PC.
- Monitor runs with **Langfuse** traces (tokens, latency, errors, no personal data) and reuse cached pairwise decisions to avoid repeat LLM calls.
- Specify each feature before building it, with testable acceptance criteria and an automated test suite (Python, FastAPI, Playwright, Vue, SQLite).
- Automate further internal engineering processes, using AI where it adds value and conventional automation where it does not.

Gen AI Developer
Sep 2024 – Aug 2026

DTx – Digital Transformation CoLab · *Full-time · Braga, Portugal*

- Led the development of a multimodal **AI home assistant** over a 2-year project, with tool-use and function calling, multi-agent orchestration, **RAG** over internal knowledge bases (pgvector), persistent memory, IoT smart home control and voice-to-voice pipelines.
- Developed multiple **unstructured data extraction** systems, turning PDFs, images and heterogeneous sources into structured, queryable data.
- Benchmarked virtually every major closed- and open-source model released since GPT-3.5 against our own test sets to choose the right one for each project.
- Specified and rack-mounted on-premise GPU servers for vLLM model serving (Python, FastAPI); found a missing NVLink bridge that was limiting inference speed.

Research Fellowship
Jan 2024 – Jun 2024

Fundação para a Ciência e a Tecnologia (FCT) · *Full-time · Braga, Portugal*

Developed a platform that autonomously extracts research locations and metadata from geological articles with closed- and open-source LLMs, building a database for geological research.

EDUCATION

Universidade do Minho
2022 – May 2025

M.Sc. in Mathematics and Computation – Machine Learning specialization

Final Grade: **18/20** | Thesis Grade: **20/20**

Thesis: *Large Language Model–Based Extraction of Georeferenced Data from Geological Literature*

Universidade do Minho
2018 – 2022

B.Sc. in Mathematics

SKILLS & TECHNOLOGIES

- **Programming:** Python (primary)
- **ML / AI:** LLMs, RAG, Agentic Architectures, Prompt Engineering, LLM Evaluation, Langfuse, vLLM, PyTorch, Hugging Face, LangChain
- **Web & Data:** FastAPI, Vue.js, Playwright, PostgreSQL (pgvector), SQLite
- **DevOps & Cloud:** Git, Docker, Kubernetes, Ansible, GCP
- **Languages:** Portuguese (Native), English (Fluent)
